PROFESSIONAL SUMMARY

Senior Developer with 11 years across e-commerce, compliance, healthcare and telecom, and a decade in **C#** and **ASP.NET Core**. At Optimizely, shipped AI tooling on the **OpenAI** Platform APIs and a .NET framework for its AI platform. Led a monolith-to-microservices rebuild that made APIs ~9x faster, and built .NET cloud backends on AWS and Azure.

TECHNICAL SKILLS

Programming Languages:	C#, TypeScript, JavaScript, Python
.NET Ecosystem:	.NET 10, .NET 8, ASP.NET Core, Web API, ASP.NET MVC, Blazor, Entity Framework Core, LINQ, SignalR, WCF
AI & LLM Engineering:	LLM Integration (OpenAI Platform APIs, Google Gemini), MCP, Claude Code (Anthropic, custom agents/commands)
Architectures & Patterns:	Microservices, Event-Driven, Distributed Systems, Serverless, Layered Architecture, Repository/Service
Cloud Platforms:	Azure (App Services, Functions, VM), AWS (EC2, Lambda, API Gateway, S3, SNS, SQS, Step Functions, IAM)
Databases & Caching:	SQL Server, PostgreSQL, MongoDB, MySQL, DynamoDB, SQLite, Redis, Elasticsearch
Performance & Diagnostics:	Performance Profiling, Load Testing (JMeter), EF Core Query Optimization, SQL Indexing, Hot-Path Analysis
Frontend:	React, Next.js, Angular, Redux, Tailwind CSS, Vite, Webpack
APIs & Messaging:	REST, gRPC, RabbitMQ
Security & Auth:	OAuth2, JWT, ASP.NET Core Identity, Microsoft Entra ID (Azure AD), AWS Cognito
Testing:	xUnit, NUnit, Moq, Playwright, Jest
DevOps & Platforms:	Docker, GitHub Actions, Azure DevOps, Jenkins, Git, Linux, IIS
Node.js:	Express.js, hapi.js, Electron
Commerce & CMS Platforms:	Optimizely (Configured Commerce, Opal), Episerver

WORK EXPERIENCE

Senior Developer Optimizely <i>B2B Commerce</i>	April 2023 – June 2026 optimizely.com
C#, ASP.NET Core, EF Core, SQL Server, TypeScript, Angular, React, Node.js, Azure, Python, OpenAI Platform APIs, Optimizely Opal, JMeter, Claude Code, Cursor, GitHub Copilot, MCP tooling	
- Proactively identified process inefficiencies and co-engineered SpireWiz, an internal AI-powered upgrade automation tool (Python, OpenAI Platform APIs): a three-way merge settles what it can, the OpenAI APIs resolve the rest. It cut upgrade cycles by up to 80% and reclaimed an estimated 600+ developer hours a year. - Led the code-profiling effort on a performance engagement for a large B2B distributor, as part of a 4-engineer Expert Services team, using JMeter and the Visual Studio profiler to diagnose N+1 queries and over-configured handler pipelines. The client shipped our guidance to meet a sub-1000ms API SLA. - Delivered the first completed Classic (Angular) to Spire (React) frontend migrations on Optimizely Configured Commerce, 55% faster than the team's earlier attempts, and set reusable patterns for future upgrades. - Delivered Configured Commerce work for 20+ B2B client storefronts: platform upgrades, Spire (React) and Classic (Angular) features, C# extensions (handlers, pipelines, integration jobs) for quotes, PunchOut, pricing and orders, and extended ERP integrations (Infor CloudSuite, SX.e, Acumatica). - Selected for cross-team work on Optimizely Opal, the company's AI platform: built OpalSpark, a .NET 9 framework for Opal AI tools with attribute-based discovery, config-driven auth, health, rate-limiting and tracing, plus custom Opal tools for Configured Commerce admin endpoints and more.	

- Built and used AI-assisted coding workflows (Claude Code custom agents and commands, Cursor, GitHub Copilot, **MCP** tooling) daily on Configured Commerce client work for feature development, bug fixing and investigation, with all production code human-reviewed.

Software Engineer → Senior Software Engineer | Kaz Software

June 2016 – March 2023

Custom Software Development Company · Global Clients (35+ countries)

kaz.com.bd

C#, ASP.NET Core, SQL Server, MongoDB, DynamoDB, TypeScript, Angular, React, Node.js, hapi.js, AWS, Azure, Docker, Linux

- Architected and led the legacy-to-**microservices** modernization of the Reganalytics global trade-compliance platform on **ASP.NET Core** and Docker, cutting API response times from ~2.5s to ~280ms. Split several parts of the monolith into their own services, including authentication and authorization on ASP.NET Core Identity with a shared client library for sibling services.
- Architected serverless **AWS** infrastructure (Lambda, Step Functions, DynamoDB, Cognito) for WebEvv, an EVV healthcare-tracking platform, hosting **ASP.NET Core** APIs behind API Gateway so spiky visit traffic scaled to zero, with monthly invoicing running as its own Lambda.
- Designed and implemented load-balanced Ocelot API gateways for 40+ **.NET** services at Robi, covering routing, authentication, rate limiting and request transformation, and established automated shell-scripted CI/CD across Linux servers, reducing deployment time from 6–8 hours to under 1 hour.
- Contributed to the legacy ASP.NET to ASP.NET MVC and **Angular** upgrade of Devensoft, an enterprise M&A platform for US clients, implementing backend APIs, jQuery features and Angular components across six core modules on **Azure** with Azure DevOps.
- Led JoyList, owning the hapi.js / Node.js backend end-to-end with MongoDB and contributing to the **React** + Redux (TypeScript) client alongside two teammates, delivering the social-networking platform for sharing movies, series and books to production.
- Delivered 12+ enterprise projects across telecom, finance, healthcare and social engagement while managing and mentoring cross-functional Agile teams of 8–12 developers, enforcing code-quality standards by instituting code review.

Software Engineer | Chorki Limited

June 2015 – May 2016

Local Search Engine & E-Commerce Aggregator

chorki.com

Node.js, JavaScript, AngularJS, MySQL, MongoDB, RabbitMQ

- Engineered a cross-platform Notification Hub generating targeted push notifications across Android, iOS, and Windows desktop clients using RabbitMQ and Socket.io.

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals

PERSONAL PROJECTS

- **DevSpace – Windows Desktop App (Public Preview)** [Website](#) | [GitHub Releases](#)
A Windows developer-productivity app, shipped to public preview, that centralizes projects, credentials and git (with a built-in visual Git client) in one dashboard. Built with Electron and **React** 18 over a layered **.NET** 9 backend, with per-project credentials encrypted via the **ASP.NET Core** Data Protection API.
- **HyperCache** [GitHub Link](#)
An open-source **.NET** 10 / EF Core 10 + Blazor reference implementation of SQL Server change-tracking (Delta) caching, cutting repeat-query latency from ~3.6s to single-digit milliseconds on a 1M-row table.

EDUCATION

Bachelor of Science in **Computer Science and Engineering**

2017

Ahsanullah University of Science and Technology (AUST)
