PROFESSIONAL SUMMARY

Senior .NET Developer with 11 years of experience building scalable, full-stack applications and **microservices** across e-commerce, compliance, healthcare, and telecom. At Optimizely, co-engineered **SpireWiz**, an internal GPT-4o tool that cut enterprise upgrade cycles, and led code profiling on a 60-day client performance engagement. Track record of leading legacy-to-cloud migrations (Azure/AWS) and mentoring engineering teams to ship high-reliability applications.

SELECTED ACHIEVEMENTS

- SpireWiz:** Co-engineered a GPT-4o upgrade-automation tool that cut Optimizely B2B Commerce upgrade cycles by up to **80%** and reclaimed 600+ developer hours annually across 25+ enterprise clients.
- Reganalytics:** Led the monolith-to-**microservices** modernization (**ASP.NET Core**, Docker), cutting API response times from ~2.5s to ~280ms (~9x faster) while leading 8-12 engineers.
- OpalSpark:** Built a .NET 9 framework for Optimizely Commerce Opal AI tools — attribute-based tool auto-discovery, config-driven auth, and built-in health, rate-limiting and tracing.

TECHNICAL SKILLS

Programming Languages:	C#, TypeScript, JavaScript, Python
.NET Ecosystem:	.NET 9, .NET 8, ASP.NET Core, Web API, ASP.NET MVC, Blazor, Entity Framework Core
Node.js & JavaScript Runtimes:	Node.js, Express.js, hapi.js, Electron
Architectures & Patterns:	Microservices, Event-Driven, Distributed Systems, Serverless, Repository/Service
AI Tools & Technologies:	LLM Integration (OpenAI GPT-4o API, Google Gemini), Claude Code (Anthropic, custom agents/commands), MCP, Cursor IDE, GitHub Copilot
Databases & Caching:	SQL Server, PostgreSQL, MongoDB, MySQL, DynamoDB, SQLite, Redis, Elasticsearch
Cloud Platforms:	Azure (App Services, AD, Functions, VM), AWS (Lambda, API Gateway, S3, Step Functions)
DevOps & CI/CD:	Docker, GitHub Actions, Azure DevOps, Jenkins, Git, IIS
Security & Auth:	OAuth2, JWT, ASP.NET Core Identity, Microsoft Entra ID (Azure AD), AWS Cognito
Frontend:	React, Next.js, Angular, Redux, Tailwind CSS
APIs & Messaging:	REST, gRPC, RabbitMQ
Testing:	xUnit, NUnit, Moq
Performance & Diagnostics:	Performance Profiling, Load Testing (JMeter), EF Core Query Optimization, SQL Indexing
Methodologies:	Agile (Scrum, Kanban), Jira

WORK EXPERIENCE

Senior Developer Optimizely	April 2023 – June 2026
B2B Commerce Dhaka, Bangladesh	optimizely.com
C#, ASP.NET Core, EF Core, SQL Server, TypeScript, Angular, React, Node.js, Azure, Python, OpenAI, Optimizely Opal, JMeter	
- Co-engineered SpireWiz, an AI-powered upgrade automation tool (Python + OpenAI GPT-4o) that reclaimed 600+ developer hours annually across 25+ enterprise clients, and was adopted as the team's standard upgrade workflow. - Customized and maintained the Optimizely Configured Commerce platform for B2B clients, using AI-assisted SDLC workflows daily (Claude Code custom agents/commands, Cursor, GitHub Copilot, MCP) to speed analysis, feature work and refactoring, with all production code human-reviewed. - Extended the Configured Commerce backend in C# through its handler and pipeline model rather than forking the base platform, including the ERP integration pipelines for Infor CloudSuite Distribution and SX.e V11 that sync inventory, pricing and orders into the storefront. - Led the code-profiling effort on a 60-day performance engagement for a large B2B distributor, in a 4-engineer Expert Services team: load-tested (JMeter) and profiled hot-path APIs, diagnosed N+1 query patterns and over-configured handler pipelines, and delivered optimization guidance (batch EF Core lookups, AsNoTracking projections) the client shipped to meet a sub-1000ms API SLA.	

- Delivered the first completed Classic (**Angular**) to Spire (**React**) frontend migrations on the Optimizely Configured Commerce platform, finishing 55% faster than the team's earlier attempts at comparable migrations and establishing reusable migration patterns for future client upgrades.
- Conducted 100+ code reviews across 15+ B2B client projects and instituted mandatory PR review across the engineering team.

Senior Software Engineer | KAZ Software

June 2016 – March 2023

Promoted from Software Engineer | Global Clients (35+ countries) | Dhaka, Bangladesh

kaz.com.bd

C#, ASP.NET Core, SQL Server, MongoDB, DynamoDB, TypeScript, Angular, React, Node.js, hapi.js, AWS, Azure, Docker

- Architected and led the legacy-to-**microservices** modernization of the Reganalytics global trade-compliance platform (**ASP.NET Core**, Docker), including a dedicated auth microservice on ASP.NET Core Identity with role-based access and a distributable client SDK.
- Architected serverless **AWS** infrastructure (Lambda, Step Functions, DynamoDB, Cognito) for WebEvv, an EVV healthcare platform, hosting **ASP.NET Core** APIs in Lambda behind API Gateway so spiky visit traffic scaled to zero between events.
- Delivered backend APIs and **Angular** components across six modules of Devensoft, a US enterprise M&A platform, during its legacy ASP.NET to ASP.NET MVC upgrade on **Azure** (App Services, Functions, VM, Azure AD) with Azure DevOps.
- Designed load-balanced Ocelot API gateways (routing, auth, rate limiting) across 40+ **.NET** services for Robi, a telecom serving millions of subscribers, and shell-scripted CI/CD across 9+ Linux servers, cutting deployment from 6–8 hours to under 1 hour.
- Led JoyList, a social-networking platform, owning the hapi.js / Node.js backend with a **React** + Redux (TypeScript) front end and MongoDB, and delivered it to production.
- Managed and mentored cross-functional Agile teams of 8–12 developers, enforcing code quality standards and integrating automated testing gates to minimize production regressions.

Software Engineer | Chorki Limited

June 2015 – May 2016

Local Search Engine & E-Commerce Aggregator | Dhaka, Bangladesh

Node.js, JavaScript, AngularJS, MySQL, MongoDB

- Engineered a cross-platform Notification Hub generating targeted push notifications across Android, iOS, and Windows desktop clients.
- Built a backend data aggregation engine to scrape, process, and store news feeds from multiple high-volume sources into MongoDB.

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (Credential ID: 733CAA4F32A38510)

PERSONAL PROJECTS

- **DevSpace – Windows Desktop App (Public Preview)** [Website](#) | [GitHub Releases](#)
A free developer-productivity app that auto-discovers 100+ installed developer tools in under 3 seconds and encrypts per-project credentials via the **ASP.NET Core** Data Protection API. Built with Electron + **.NET 9**, **React 18** and TypeScript over a layered .NET solution (Repository/Service). Architected and co-developed; shipped to public preview.
- **@strix-ai/currentdt-mcp** [LobeHub](#) | [MSeep AI](#) | [NPM](#) | [GitHub Link](#)
A co-authored open-source TypeScript MCP server providing real-time datetime tooling for AI assistants (Cursor, Claude, VS Code).
- **EmailEngine** [GitHub Link](#)
A Dockerized TypeScript service that syncs Outlook mailboxes into Elasticsearch in real time via Microsoft Graph API webhooks and **Azure AD** OAuth, behind an InversifyJS provider abstraction that admits a new mail source without touching the core.

EDUCATION

Bachelor of Science in **Computer Science and Engineering**

2017

Ahsanullah University of Science and Technology (AUST) | Dhaka, Bangladesh
